

SPRAYED. SEALED. SECURED.

COATED ROOF RESTORATION

SUNVEK

Coating is applied in a seamless monolithic layer, sealing and restoring the roof surface, and offering a cost-effective solution to leak issues.

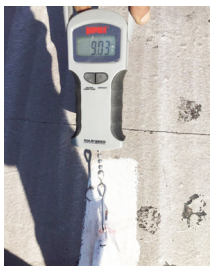

COST EFFECTIVE - Roof coatings can extend the life of an existing roof which is a very cost effective option for addressing leak issues. It will not transfer heat into the structure and its white color reflects heat and helps reduce cooling costs.

VERSATILE - Coatings are self-adhering and can be applied to most roof surfaces. They provide a seamless, durable, and flexible layer which protects against leaks.

RESILIENT - Roof coatings maintain their flexibility and function within an extreme range of temperatures which makes them an ideal leak solution regardless of climate. They provide excellent hail resistance and can withstand a variety of climate and weather challenges. They also protect the roof from ozone and UV damage.

REPAIRING PATCHES & SEAMS ON FLAT & LOWPITCHED ROOFS

The roof is washed and leaks are sealed with seam sealant before the coating is applied which creates a sealed and seamless roof.
